

# HEXAGON PANELS

Hexagon panels are knife-cut. This is an excellent retrofit solution for boardrooms, classrooms and smaller spaces.

Generally installed in groups to create a fun and flexible wall pattern. (The more panels are used, the better the acoustic absorption performance.)

Bespoke shapes to suit project requirements are available.

## Installation

- For wall fittings, use two to three 60mm pieces of UHB (Ultra High Bond) double sided sticky tape.
- Optionally, use spirit level for tidy installation.

Panels can be installed with or without a negative detail between them.

Other Patterns available.  
Contact T&R for more details.
